

Why? We Are A

A 'HEALTHY SWIMMING' FACILITY

✓ Pool Water Monitoring

The water in our Swim School is automatically tested several times a minute and manually tested up to 6 times per day using the latest Photometer Water Testing Equipment. This helps to ensure that our swim school is not only comfortable to swim in, but exceeds with the strictest of health guidelines.

That is why it is strongly recommended by:

The US Center for Disease Control

The Facilities Dept of USA Swimming

And was used in

Beijing & Sydney Olympic Pools

✓ A Healthy Package for Your Children

Minimal Chlorine + Effective Air Handling + Wet Deck Pool

UV breaks the vicious chlorine circle. Our air handling and wet deck pool complete the package.

Ultra violet light sanitation minimizes chlorine use, whilst doing a superior job of disinfecting the water. Nasty chloramines, and chlorine vapour are almost totally eliminated. A wet deck pool, and sophisticated air handling system move completely fresh air across the surface of the water, where your children are swimming, and quickly exhaust it to the outside.

✓ Ultra Violet Light Sanitation

Imagine swimming in a pool with LESS chemicals, NO irritations, NO offensive odours or the other disadvantages of highly dosed pools.

UV LIGHT kills bacteria, viruses, moulds and spores, even the ones that chlorine doesn't, AND it inactivates the nasty by-products of chlorine.

✓ Wet Deck Pool

By having the water at the same level as the surrounding floor, a wet deck pool prevents stale air being trapped at water level, which can happen in the older style pools with the water below floor level.

✓ High Air Turnover

We fully replace the air in our pool building with 100% fresh air many times each hour. Health regulations require that a small amount of free chlorine is present in the pool. This is much lower than a pool that doesn't have UV, and has none of the nasty by-products of pools that have chlorine alone.

Eltham Swimming School is Renowned for Excellence in Swim Teaching

Now we tick all the boxes as a Healthy Swimming Facility

Why would your children want to learn to swim anywhere else?
